

Real-time gross settlement system (RTGS), currency exchange and remittance platform.

### Project Overview

Scratch is a Blockchain as Service real-time gross settlement system (RTGS), currency exchange and remittance platform that allows decentralized businesses and freelance teams the ability to access and transfer funds or pay for goods & services instantaneously while protecting against fraud and identity theft.

Despite a fragmented and still maturing ecosystem, the time has come for firms to move aggressively in developing business and technology strategies for a blockchain-enabled world. Those that linger in the experimentation phase will be left behind by the rapid pace of innovation

Scratch is on a mission to build next generation payment technology platform of the future...
